

Uses of the briefcases

The audio/video transmission kits can be used in the following functions:

- ***Personal wireless camera***

A person carries the camera hidden inside the clothing or in a briefcase, with the audio/video transmitter. In remote way the signal is received with the audio/video receiver, and the information is recorded in digital format, with the DVR.

- ***Personal camera and recorder***

In those situations in which you suspect that the audio/video emission could be detected, you can carry the camera hidden inside your clothes or in a briefcase, directly connected to the DVR.

- ***Install hidden surveillance***

The camera is installed on a fixed site, and directly wired to the DVR. The recording system can be manually activated or through the DVR's remote control, or by using movement sensors, etc.-

- ***Hostage taken situations***

In those situations of hostage taken, the hidden cameras with the audio/video transmitters can be installed to match all the possible ways out that the criminals could take, without they notice them and without risking the police staff.
